## HSEC Online® Additional Modules

Digitise the management of all aspects of your company's inventory using the

### HSEC Online® Inventory Module

## Inventory Module

The HSEC Online® **Inventory Module** allows you to manage all aspects of your inventory. With this product that is fully integrated with HSEC Online®, you can allocate inventory to employees or contractors, return stock, do stocktaking and draw reports on current stock levels and re-order reports.

The **Inventory Module** is ideal for managing your Personal Protective Equipment (PPE), corporate clothing and any other tools and items issued to employees.

Within this module you can capture your inventory with fields for cost, acquisition date and supplier. When issuing the stock, you allocate the stock to an individual, allowing you to keep track of exactly where your stock or inventory is going. Re-order levels and critical shortage levels for each stock item gives you control of your stock on hand.

Additional validity functionality on each inventory item allows you to track when PPE has been allocated to a person and when they are due to get PPE again. This allows you to plan your stock levels more accurately and helps you to manage costs.

The HSEC Online® **Inventory Module** is a single place where you can manage your inventory; it allows you to allocate inventory to employees, return stock, do stocktakes, and draw reports on current stock levels or costs associated with inventory.

- ✓ Real time overview of current stock levels
- ✓ Line of sight of stock issued to employees
- ✓ Cost reporting by employee or department
- ✓ Stocktake
- ✓ Re-order reports

**Don't be reactive, get proactive with HSEC Online®**
